

LARGE APPLIANCE

Furniture Leaders Choose Cleco MP Series for Power & Productivity

5 minute(s) to read

At one of the largest furniture manufacturing sites in North America, where thousands of home and commercial pieces come together daily, teams faced a clear challenge: they needed tools that could deliver strong torque in a lightweight build—reducing operator strain while staying reliable under intense, high-volume production. The goal was to find a smarter alternative to low-cost imports that too often led to downtime, repair costs, and inconsistent output.

Facing these pressures, they found a solution in Cleco's MP2264B. Packing up to 111 ft-lbs of torque into a compact, pistol grip design, it provided the speed and durability needed to keep lines moving efficiently. Operators appreciated its balanced feel and easy maneuverability, while plant managers pointed to fewer maintenance headaches compared to lower-cost imports.

This solution has since become the trusted standard across multiple sites, including major production sites in Texas and North Carolina.

With Cleco on the floor, the manufacturer is achieving dependable throughput and long-lasting value—building furniture with the confidence that comes from tools designed for demanding production.
